Dear Karrot hiring team,

When I learned about Karrot's mission to strengthen local communities through technology, I was immediately drawn to the Machine Learning Engineer role. The opportunity to leverage ML and LLMs to refine the Feed Quality and Ad Recommendation systems aligns perfectly with my background in deploying production-ready AI applications that process unstructured data and enhance user experiences.

In my recent roles, I have focused on architecting scalable ML and LLM integrations that directly impact engagement and operational efficiency. I accelerate my own development cycles using AI tooling like Claude Code, allowing me to ship robust architectures rapidly. Here is how my experience maps to your needs:

- **Applied LLMs for Content Understanding:** At FlowSpace.co, I architected an AI-powered system that ingests unstructured data from PDFs and images to generate structured marketplace listings, directly analogous to using LLMs for deep content understanding in your Feed Quality team.
- **Robust Production Architectures:** I led the end-to-end migration of a live platform to a Next.js and Laravel architecture that successfully scales to 4,500+ active users, demonstrating my ability to write efficient, readable code for large-scale environments.
- **Data-Driven Pipelines:** For UltraStrategy.com, I built an NLP-based resume-parsing pipeline using advanced LLM extraction, ensuring high accuracy and reliability across diverse, messy real-world data inputs.

What excites me most about Karrot is the chance to take these applied AI skills and utilize them in a large-scale, data-driven environment where incremental model improvements create tangible value for neighbors connecting with each other. I am passionate about staying current with DL/ML trends, and I am eager to apply new methodologies to your recommendation and targeting challenges.

I would welcome the opportunity to discuss how I can contribute to Karrot's AI initiatives.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
