Hiring Manager
Litmus7
Re: Application for AI Engineer position

Dear Hiring Manager,

I am writing to express my strong interest in the AI Engineer position at Litmus7. With a proven track record of architecting end-to-end LLM applications, integrating agentic workflows, and deploying cloud-native backend systems, I am excited about the opportunity to contribute to Litmus7's innovative AI-driven engineering initiatives.

In my recent role at FlowSpace.co, I led the development of a production-grade multi-agent pipeline using Python and advanced Large Language Models to automate complex document ingestion and data standardization. By designing secure, human-in-the-loop workflows with strict schema validation, I ensured high-quality AI outputs that scaled seamlessly for over 4,500 active users. My experience in collaborating with cross-functional agile teams has equipped me with the skills to rapidly translate business requirements into intelligent, secure, and resilient GenAI integrations.

Litmus7's commitment to solving complex problems through technology aligns perfectly with my background in applying AI to automate and scale operations. I am particularly drawn to your focus on leveraging predictive models and generative frameworks to drive business value. I am confident that my deep expertise in LLMOps, cloud infrastructure, and robust API design will enable me to make an immediate impact on your engineering team.

Thank you for considering my application. I would welcome the opportunity to discuss how my technical skills and experience in delivering scalable AI solutions align with Litmus7's vision. Please find my CV enclosed for your review.

Sincerely,
Prabhavit Gupta
