Hiring Manager
Netcraft
London, UK

Subject: Application for Software Engineer (Machine Learning)

Dear Hiring Manager,

I am writing to apply for the Software Engineer (Machine Learning) position at Netcraft. With a strong track record of rapidly building and deploying LLM-driven applications and intelligent workflows into production environments, I am excited by the opportunity to apply my skills to adversarial machine learning and cybercrime disruption.

At FlowSpace.co, I serve as Lead Developer, where I built and deployed our flagship AI listing bot. This system successfully processes multi-modal inputs—ranging from PDFs and raw websites to images—and routes them through a human-in-the-loop review pipeline. My hands-on experience in building LLM classifiers and managing data extraction workflows aligns closely with Netcraft's need to detect and classify phishing attempts from varied adversarial sources. Furthermore, I led our core platform's migration to a Next.js and Laravel stack, ensuring our AI features were backed by robust, scalable production infrastructure.

While my background is in PropTech and AI automation rather than traditional cybersecurity, the core engineering challenges are remarkably similar: processing messy, multi-modal data at scale, rapidly iterating on LLM prompts and classifiers, and seamlessly integrating these models into live production traffic. I am adept at utilizing tools like Claude Code and various LLM APIs to build robust solutions quickly. Additionally, my background in philosophy and international studies provides me with a strong analytical foundation for deconstructing the constantly evolving logic of online scams.

I am currently based in Venice, Italy, holding a European Long Term Residence Permit, and I am highly open to relocating to the UK (London, Manchester, or Bath) for this role.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience in building and deploying LLM-driven applications can contribute to Netcraft's mission of disrupting cybercrime.

Sincerely,

Prabhavit Gupta
