Motivation letter for Application for Forward Deployed Engineer – Terra API

Dear Hiring Manager,

I am writing to express my interest in the Forward Deployed Engineer position at Terra API. As an AI Solutions and Automation Engineer based in Venice, I have been closely following Terra API and its mission to connect health data across devices. The opportunity to work embedded with strategic customers to architect and ship production code within their stacks aligns perfectly with my professional expertise in complex API integration, rapid prototyping, and full-stack debugging.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Laravel. Debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize advanced workflow orchestration tools and robust error handling to connect complex external APIs, architecting reliable data transformation layers and webhook consumers in TypeScript. I thrive in a high-velocity, customer-centric environment, prioritizing extreme ownership and tangible business value over rigid adherence to specific legacy frameworks.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. Recently, I oversaw a complex architectural migration from a low-code infrastructure to a robust Next.JS and Laravel stack, ensuring that our rapid prototypes evolved successfully into highly scalable, reliable, and secure enterprise products.

I am also open to learning new systems and techstack. I recently completed a course in Microsoft Co Pilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my practical background in orchestrating complex data workflows and full-stack API integrations can immediately contribute to your team of experts at Terra API.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
