To: Engineering Hiring Team – Telnyx
Position: Forward Deployed Engineer, Southern Europe
Date: September 19, 2026

Dear Telnyx Hiring Team,

I am writing to express my enthusiasm for the Forward Deployed Engineer position for Southern Europe at Telnyx. Telnyx's carrier-grade communications platform, real-time voice infrastructure, and cutting-edge Voice AI APIs represent the gold standard in modern programmable telecommunications. As an engineer who builds at the intersection of real-time streaming pipelines and autonomous AI agents, I am eager to help Telnyx's customers across Southern Europe architect and scale high-performance solutions on your platform.

In my recent experience as a Forward Deployed & Applied AI Engineer at FlowSpace in Italy, I have worked directly with enterprise clients to design, integrate, and deploy real-time communications pipelines and conversational agent architectures. I build robust backend services using Python, TypeScript, FastAPI, and WebSockets, connecting low-latency voice and messaging streams to LLM reasoning engines. A cornerstone of my approach is designing automated evaluation and observability harnesses to benchmark audio streaming latency, transcription accuracy, and tool-calling reliability in production.

Living in Italy (Venice/Milan), fluent in Italian and English, and holding an Italian EU Long-Term Residence Permit (*Permesso di Soggiorno UE per Soggiornanti di Lungo Periodo*), I have full permanent work authorization across Southern Europe without requiring visa sponsorship. I would welcome the opportunity to contribute my technical background and customer delivery skills to Telnyx's expanding regional presence.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
