Dear TechTree and the Founding Team,

I am writing to express my strong interest in the Forward Deployed Engineer role for the European defence startup based in Paris and Warsaw. The opportunity to build software from zero for challenging environments, working alongside founders from Cloudflare and GIGN, is exactly the kind of fast-moving, high-stakes engineering challenge I seek. As a pragmatic software generalist with hands-on experience building multi-step LLM pipelines and architecting resilient integrations, I am excited about rapidly iterating on AI prototypes directly with early customers.

Operating at the intersection of customer-facing deployment and core engineering requires not just writing production code, but understanding complex operational realities and translating them into reliable technical systems. At FlowSpace, I led the successful migration of a live platform scaling to over 4,500 users and spearheaded the development of custom LLM pipelines that transformed messy, unstructured real-world data into validated production databases.

My background aligns directly with the demands of deploying bespoke AI and software prototypes in the field:

- **LLM Pipelines & AI Prototyping:** I architect end-to-end AI pipelines integrating multiple LLMs (Anthropic, OpenAI) with structured tool use, RAG, and strict JSON validation. At FlowSpace, I built an ingestion engine from scratch that safely processed diverse inputs via human-in-the-loop workflows. I thrive on rapidly prototyping intelligent systems and moving them into production.
- **Building from Zero in Ambiguous Environments:** As a lead developer and freelance engineer for early-stage companies (FlowSpace, Urlink), I am accustomed to scoping technical requirements directly with founders and clients. I take ownership of the full stack (TypeScript, Python, PostgreSQL, Node.js) to deliver working software quickly without getting bogged down by over-engineering.
- **Translating Complexity to Stakeholders:** A core part of my role has been bridging the gap between engineering and non-technical stakeholders. Whether deploying a new API integration or a complex AI workflow, I ensure the underlying system is robust while presenting a simple, reliable interface to end-users and client leadership.

While I hold an Italian EU Long Term Residence Permit rather than citizenship, and communicate fluently in English (along with Italian and Hindi), I am deeply motivated by your mission and highly adaptable to new tech stacks and challenging on-premise environments. I am fully open to working on-site in Paris or Warsaw.

I would welcome the opportunity to discuss how my execution-focused mindset and experience with agentic AI pipelines can accelerate your deployments in the field.

I look forward to hearing from you.

Kind regards,

Prabhavit Gupta
