Dear Hiring Team at TriTech Business Solutions,

As a Senior Full Stack Engineer who has spent the last few years architecting and deploying scalable applications for enterprise clients, I am excited to apply for the Senior Forward Deployed Full Stack Engineer position at TriTech Business Solutions. I specialize in bridging the gap between core engineering and customer success, working directly with stakeholders to customize, integrate, and deploy software solutions into robust production environments.
In my recent role at FlowSpace, I spearheaded the deployment and migration of cloud-native architectures, demonstrating the technical rigor and customer-facing agility required of a Forward Deployed Engineer. Here is how my experience aligns with your mission:

- **Full-Stack Mastery:** Deeply experienced with the full-stack TypeScript ecosystem, including Node.js and component-based frontend frameworks like Angular and Next.js, allowing me to build comprehensive, end-to-end solutions.
- **Enterprise Integrations:** Engineered robust integrations mapping internal software to external CRMs and enterprise systems, ensuring seamless data flow and process automation.
- **Customer-Embedded Delivery:** Acted as the primary technical authority for clients, translating ambiguous operational needs into technical requirements, taking full lifecycle ownership from design and coding to successful implementation.

TriTech's emphasis on a hands-on "build-team" style position presents exactly the kind of large-scale challenge I thrive on. I am deeply aligned with the forward-deployed model, knowing firsthand that deploying successfully means understanding both the code and the customer's business needs.
I am drawn to this remote opportunity and bring a strong foundation in scalable full-stack engineering. I would welcome the chance to discuss how my hands-on experience and ability to ramp up quickly can accelerate customer deployments for TriTech Business Solutions.

Sincerely,

Prabhavit Gupta
