Prabhavit Gupta

Forward Deployed Engineer | Agentic Platform, LLM Orchestration & Enterprise Deployments

+39 351 610 7807 | prabhavitg@gmail.com | linkedin.com/in/prabhavit-gupta | github.com/prab-gupta
| Venice, Italy (EU Permanent Resident | CET / GMT Aligned | European Travel Ready)

Executive Summary

- **Forward Deployed Engineering & Enterprise Agent Delivery:** Applied AI engineer with 3 years commercial software experience embedding directly with enterprise technical teams to translate ambiguous business operations into secure, production-grade agentic workflows and tool-calling systems.
- **Agentic Platforms, LLM Orchestration & Tool Calling:** Deep practical experience designing and shipping multi-step reasoning agents (ReAct, Plan-and-Execute, LangGraph), Model Context Protocol (MCP) tool interfaces, hybrid RAG pipelines, and sandboxed tool execution environments.
- **Enterprise Reliability, Rigorous Evals & Observability:** Proven track record establishing quantitative evaluation harnesses (LLM-as-judge, DeepEval, Langfuse tracing), auditing agent safety and token latency, and hardening client integrations within sensitive data environments.

Technical Skills & Core Competencies

- **Agentic Architecture & LLM Stack:** Multi-Agent Orchestration (LangGraph, ReAct, Plan-and-Execute), Tool Calling, Model Context Protocol (MCP), Vector Databases (Qdrant, pgvector), Hybrid RAG, Prompt Caching, Semantic Chunking.
- **Evaluation & Observability:** LLM-as-a-Judge, Groundedness & Factuality Evals, DeepEval, Langfuse Distributed Tracing, Latency & Cost Profiling, Regression Test Suites.
- **Forward Deployed Delivery:** Enterprise Client Embedding, Technical Scoping, API Integrations, Webhook Ingestion, Security & Auditability Controls, 20–40% On-Site Travel Ready.
- **Core Software Engineering:** Python (AsyncIO, FastAPI, PyTest), TypeScript / Node.js, Next.js, Docker, PostgreSQL, REST APIs, GraphQL, Linux CLI, Git.

Professional Experience

Forward Deployed AI Engineer & Technical Solutions Consultant • *Independent Consultancy*
2024 – Present • Venice, IT (Remote / Hybrid)

- Embedded directly with client engineering and technical architecture teams across Europe to design, scope, and deploy enterprise AI agent workflows connecting frontier LLMs with proprietary internal tools and databases.
- Engineered robust agentic workflows utilizing ReAct and Plan-and-Execute architectures, enabling models to reason across multi-step API chains, validate inputs against strict JSON schemas, and execute audited actions.
- Implemented Model Context Protocol (MCP) servers and clients, establishing standardized tool abstraction layers that decoupled core agent reasoning from client-specific legacy enterprise endpoints.
- Established automated evaluation pipelines using Langfuse and programmatic test benches, tracking hallucination rates, tool parameter selection accuracy, and end-to-end task completion rates before production rollout.
- Collaborated with client security stakeholders to enforce auditable action logging, sandboxed execution boundaries, and prompt-injection mitigations across production agent loops.

Lead Developer & Product Engineer • *FlowSpace.co*
Mar 2024 – Aug 2026 • London, UK (Remote / Europe)

- Led platform engineering and integration architecture, scaling active user traffic across UK and European enterprise hubs from 2,000 to 4,500+ professionals.
- Designed and shipped conversational AI support and automated routing agents integrated with live reservation systems, handling unstructured member inquiries with high task resolution accuracy.
- Re-architected core platform services into modular Next.js and backend API microservices, eliminating technical debt and guaranteeing continuous 99.9% uptime across high-frequency booking cycles.
- Built resilient multi-source data ingestion pipelines with automated schema validation and exception monitoring, normalizing external inventory feeds across disparate third-party formats.
- Maintained close technical collaboration with enterprise space operators, translating complex venue operational constraints into reliable API integrations and automated webhook event handlers.

Full-Stack Solutions Engineer • *Tech Automation Systems*
2023 – 2024 • Milan / Remote, IT

- Delivered custom API integrations and automated data microservices in Python and TypeScript, bridging client operational systems with centralized data stores.
- Implemented automated unit and end-to-end integration testing suites in Docker CI/CD pipelines, preventing integration regressions across shared customer interfaces.

- Partnered directly with non-technical business leads to extract operational edge cases, formalizing them into rigorous technical specifications and reliable software deliverables.

Key Engineering Projects

- **Autonomous Tool-Calling & Evaluation Harness (TypeScript + MCP + Langfuse):** Architected an enterprise-grade agent runtime enabling LLMs to safely invoke external tool ecosystems with schema-enforced payload validation, full state rollbacks, and distributed tracing.
- **Multi-Source Enterprise Ingestion & Parsing Pipeline (Python + Playwright + APIs):** Built a high-throughput extraction and normalization engine processing 900+ external sources with rate limiting, error isolation, and semantic chunking for vector indexing.

Education, Languages & Legal Status

- **Bachelor of Arts in Philosophy, International Studies & Economics** – Ca' Foscari University of Venice (2020 – 2024)
  Rigorous foundation in formal logic, epistemology, decision theory, and complex systems analysis.
- **Languages:** English (C1 Full Professional / Fluent), Italian (Working proficiency), Hindi (Native).
- **Legal Status & Availability:** EU Long-Term Resident (Permesso di Soggiorno UE a Tempo Indeterminato, Italy). Full work rights across EU; based in Venice (CET, GMT+1); 100% GMT business overlap; available immediately for hybrid/travel roles.
