Application: Applied Value Engineer, Celonis (Amsterdam, Netherlands)

Dear Celonis Hiring Team,

I am applying for the Applied Value Engineer role. Understanding a business process, finding where AI or automation changes it, and building a working solution is the part of my work I enjoy most.

As Lead Developer at FlowSpace I built a Python pipeline that uses the Claude and OpenAI APIs with structured outputs and function calling to extract data, with a human review step before records reach the backend; it added 900+ listings. I built AI agents that answer support queries against live platform data, integrated the OfficeRnD and Nexudus APIs for automated bookings, consolidated leads across CRMs, and worked between developers and an external agency on a live migration off a legacy stack while the platform grew from 2,000 to 4,500+ users. My degree in Philosophy, International Studies and Economics, with a minor in Entrepreneurship, gives me a business view alongside the technical one.

On the gaps, which are significant for this role: I do not have 2+ years of executive-facing presales or value engineering, PoV execution or ROI/TCO modelling. I have not worked with PyTorch, TensorFlow, scikit-learn, XGBoost or Hugging Face, with MLOps or LLMOps, or with AWS Bedrock, Azure AI or GCP Vertex AI, and I have no supply chain or finance domain expertise or operations research background. I do not hold a master's degree and I do not speak Dutch.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Amsterdam. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
