Application: GTM Engineer, Chift (Brussels, Belgium)

Dear Chift Hiring Team,

I am applying for the GTM Engineer role. Capturing signals, qualifying them with AI and routing them to the right person automatically is the kind of system I would rather build once than run by hand, and it is close to what I did at FlowSpace.

As Lead Developer at FlowSpace I built GTM automations for the sales funnel, lead enrichment and outbound, and consolidated leads in the CRM by automating lead capture across the CRMs the organisation used. I built n8n and Make workflows for lead routing, data sync and support queries, and AI agents that work against live data. I also built a Python pipeline that uses the Claude and OpenAI APIs for structured extraction with human review, which added 900+ listings, while the platform grew from 2,000 to 4,500+ users. I use Claude Code and AI agents in my development work and ship rough versions first, then refine them.

On the gaps: my experience is as an automation and integration developer rather than in a dedicated growth or RevOps team. I have not used Clay, LaGrowthMachine or HubSpot, though I pick up new tools quickly, and I have not owned multi-touch attribution or run event and field marketing plays. I do not speak French or Dutch; I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Brussels. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
