Application: Solution Engineer II, GoCardless (Lisbon, Portugal)

Dear GoCardless Hiring Team,

I am applying for the Solution Engineer II role. Understanding how a customer's systems fit together, designing the integration and explaining it to non-technical people is the part of my work I enjoy most.

As Lead Developer at FlowSpace I integrated the OfficeRnD and Nexudus APIs end to end for automated bookings (OAuth2, webhooks, location sync), built the integration between the CRMs the organisation used to consolidate leads, and set up GTM automations for the sales funnel, lead enrichment and outbound. I worked between our internal team and an external agency on a live migration off a legacy stack while the platform grew from 2,000 to 4,500+ users, and I use Postman to test and debug APIs. I write TypeScript, PHP with Laravel, and Python.

On the gaps: I have not held a pre-sales or post-sales solution engineer title, and I have not built integrations with payment service providers, so Direct Debit and open banking would be new domains for me. My degree is in Philosophy, International Studies and Economics rather than computer science, and my technical background is about three years of hands-on integration work.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Lisbon. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
