Application: Data & AI Automation Specialist, Kultakiertue / Gold Adam (Helsinki, Finland)

Dear Kultakiertue Hiring Team,

I am applying for the Data & AI Automation Specialist role. Building agents that work on real data, with a human approval step where it matters, is how I have worked for the past three years.

The automation I would show you is the AI listing pipeline I built at FlowSpace. It scrapes operator websites and documents, uses the Claude and OpenAI APIs with structured outputs to extract listing data, and sends every record through a human review step before it is pushed to the platform API; that review step is what made it reliable enough for the team to depend on, and it added 900+ listings. I also built AI agents that answer support queries against live platform data, n8n and Make workflows for lead routing and data sync, and a booking integration with the OfficeRnD and Nexudus APIs. I work with Claude Code and MCP, write TypeScript and Python, and use PostgreSQL, MySQL and Supabase.

On the gaps: my database work is application-level, so I have less depth in transactions and exploring large unfamiliar schemas than in building the automations on top of them. I have not worked on payments, controlling or compliance reporting. I do not speak Finnish. My degree is in Philosophy, International Studies and Economics, not computer science.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Helsinki for the hybrid setup. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
