Application: AI Agent Engineer, Newsmatics (remote)

Dear Newsmatics Hiring Team,

I am applying for the AI Agent Engineer role. Finding a manual workflow, prototyping an agent for it and turning it into something reliable is what I have been doing for the past three years.

The project I would show you is the AI listing pipeline I built at FlowSpace. It is a Python pipeline that scrapes operator websites and source documents, uses the Claude and OpenAI APIs with structured outputs to extract listing data, and puts every record through a human review step before it is pushed to the platform through its API. It added 900+ listings. I also built AI agents that answer support queries against live platform data, workflow automations in n8n and Make for lead routing and data sync, and a CV parsing tool with n8n and Eden AI at UltraStrategy. I work with RAG, MCP, function calling, TypeScript and PostgreSQL, and part of the work has been deciding when a plain automation is better than an agent.

On the gaps: I have not deployed AI solutions on AWS or with Docker in production, my Python is scripting, automation and AI API work rather than deep backend development, and my testing of AI output has relied on human review rather than formal evaluation tooling. My degree is in Philosophy, International Studies and Economics, not computer science.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am comfortable working fully remote in a distributed team on CET. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
