Application: GTM Engineer, Peec AI (Berlin, Germany)

Dear Peec AI Hiring Team,

I am applying for the GTM Engineer role. Building automation that takes manual work off sales teams, from enrichment to outbound, is part of what I did as Lead Developer at FlowSpace.

There I set up GTM automations for the sales funnel, lead enrichment and outbound, and consolidated leads in the CRM by building an integration between the CRMs the organisation used, which automated lead capture. I build workflow automations in n8n and Make for lead routing, data sync and support queries, and I write TypeScript and Python for the parts the automation tools cannot handle, including a pipeline that uses the Claude and OpenAI APIs to extract structured data and added 900+ listings to the platform. I also built AI agents that streamline customer support.

On the gaps: my GTM work sat inside a broader developer role, so I do not have 2+ years in a dedicated GTM engineering or RevOps title. I have not worked with Clay, Apollo, Clearbit or HubSpot workflows, have not owned email deliverability or attribution modelling, and I do not have measured conversion figures from my automations to share. My degree is in Philosophy, International Studies and Economics, not computer science. I do not speak German.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Berlin for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
