Application: Forward Deployed Engineer, REMATIQ (Berlin, Germany)

Dear REMATIQ Hiring Team,

I am applying for the Forward Deployed Engineer role. Scoping a problem with the people who have it, building the integration or AI workflow, and running it in production is close to how I have worked for the past three years.

As Lead Developer at FlowSpace I integrated the OfficeRnD and Nexudus APIs end to end for automated bookings (OAuth2, webhooks, location sync), and worked between our internal team and an external agency on a live migration off a legacy stack to Next.js and Laravel while the platform grew from 2,000 to 4,500+ users. I built an LLM pipeline that uses the Claude and OpenAI APIs for structured extraction, with a human review step deciding what reaches the backend, which added 900+ listings, and AI agents that streamline customer support. I work in TypeScript with Claude Code and use PostgreSQL and Supabase.

On the gaps: I have about three years of experience, and my backend work is in Laravel and Next.js rather than Express services on Node.js. I have not worked with DBOS, pgvector, Prisma, Azure or Langfuse, my authentication work is OAuth rather than enterprise SSO, and I have not built software for MedTech or another regulated industry. My degree is in Philosophy, International Studies and Economics, not computer science. I do not speak German, which you list as a plus.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Berlin for the four office days a week and travelling to customer sites. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
