Application: GTM Engineer, Voucherify (Remote, Poland)

Dear Voucherify Hiring Team,

I am applying for the GTM Engineer role. Building a signal-based engine that turns data and buying signals into qualified meetings, with real ownership and room to experiment, matches how I like to work.

As Lead Developer at FlowSpace I built GTM automations for the sales funnel, lead enrichment and outbound, and consolidated leads in the CRM by automating lead capture across the CRMs the organisation used. I built n8n and Make workflows for lead routing and data sync, integrated the OfficeRnD and Nexudus APIs end to end (OAuth2, webhooks), and built a Python pipeline that uses the Claude and OpenAI APIs for structured extraction with human review, which added 900+ listings. I am comfortable with APIs, webhooks, spreadsheets and scripts, and I have also used Zapier.

On the gaps: I have about three years of experience, as an automation and integration developer rather than in an SDR, outbound agency or RevOps team. I have not built workflows in Clay, used HubSpot or dedicated sequencing and LinkedIn automation tools, or managed email deliverability at scale, and I have not sold to ecommerce or MACH companies.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I work well remotely and am comfortable working across time zones within Europe. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
