Summary

Solutions engineer with about three years of experience bridging technical workflows, API integrations, and customer requirements. At FlowSpace, I led technical discovery, integrated core platform and booking APIs (OfficeRnD, Nexudus) via REST and webhooks, and built automated data validation pipelines handling 900+ verified listings. Proficient with Postman for testing API payloads, diagnosing integration edge cases, and guiding client technical teams through evaluation and onboarding. Fluent in English, experienced managing customer pre-sales conversations, and available immediately under a B2B agreement.

Experience

FlowSpace.co • *Lead Developer (Full-time, Freelance)*
Mar 2024 - Aug 2026 • London, UK (remote)

- Built an AI listing bot with a human in the loop: it takes a brochure in any format (PDF, web page, photo or spreadsheet), drafts the full listing with an LLM, and pushes it to the backend after review. 900+ listings drafted.
- Streamlined customer support with AI agents that answer queries against live platform data and escalate to a person on low confidence.
- Integrated the OfficeRnD and Nexudus APIs for automated bookings, and built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n.
- Led the migration off a legacy stack to a coded Next.js and Laravel product: mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover. Scaled the platform from 2,000 to 4,500+ users.
- Documented product and business logic with the developer team, coordinated between the internal team and an external agency, and built a commute-time calculator tool for companies.
- *Tools: Claude Code, n8n, Playwright, Postman, Laravel, TypeScript, Supabase, GitHub, Jira, ClickUp, Miro, Google Analytics, Microsoft Clarity*
