Application: B2B Integration Engineer (TypeScript & Azure), Eneco

Dear Hiring Team,

I am applying for the B2B Integration Engineer role in Rotterdam. Reading a partner's API, mapping the data, building the integration in TypeScript and then explaining it to the people who depend on it is the work I have done for about three years.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs with REST, OAuth and webhooks, and led a live migration off a legacy stack to a coded Next.js and Laravel product (mapped the data model, chose the migration path per entity, API or CSV, and drove the cutover) while the platform grew from 2,000 to 4,500+ users. I worked with customers, the sales and operations team and an external agency, troubleshot with Postman, and documented product and business logic with the developer team. I also built support agents that answer against live platform data and escalate to a person on low confidence.

On the gaps, plainly: I have not worked with Azure, AWS or GCP, Terraform or Azure DevOps, and I have not built CI/CD pipelines or event-driven messaging with a broker. My experience is with webhooks and REST integrations, and my work has not involved a you-build-it-you-run-it on-call setup. I have about three years of experience, and my degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Rotterdam for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
