Application: Integration Platform Developer, Festo (Kaunas, hybrid)

Dear Hiring Team,

I am applying for the Integration Platform Developer role in Kaunas. Connecting applications and data reliably, and documenting the result so another team can run it, is the work I have done for about three years.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs over REST, OAuth and webhooks, built CRM lead-capture integration and GTM automations with n8n, and led a live migration off a legacy stack to a coded Next.js and Laravel product: I mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover while the platform grew from 2,000 to 4,500+ users. I work with JSON, Postman and Git, documented product and business logic with the developer team, and coordinated between the internal team and an external agency.

On the gaps, plainly: I have not worked with MQTT, AMQP or WebSockets as messaging protocols, nor with GraphQL, SOAP or XML in depth. I have not used message brokers such as Solace or API management tools such as Apigee. I have not built CI/CD automations, run an enterprise integration platform, or worked on-duty in a 24/7 follow-the-sun support rota; my work has been REST and webhook integrations. I have no cloud platform administration experience. My degree is a Bachelor's in Philosophy, International Studies and Economics rather than computer science.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Kaunas for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
