Application: Software / Integration Engineer (Agentic Systems), Shift Technology

Dear Hiring Team,

I am applying for the Software / Integration Engineer (Agentic Systems) role in Paris. Making AI agents work reliably against real data and connected systems, with a person in the loop where confidence is low, is what I have been building for about three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and led a live migration off a legacy stack to a coded Next.js and Laravel product (mapped the data model, chose the migration path per entity, API or CSV, and drove the cutover) while the platform grew from 2,000 to 4,500+ users. I connect agents to tools and data with function calling and MCP, test with Playwright and Postman, and Claude Code is my default way of building.

On the gaps, plainly: I have about three years of experience, with a lead developer role at a startup rather than a large backend team. I have not worked with C# or .NET, Azure, Cosmos DB or Service Bus, gRPC, or a microservice architecture. I have not built CI/CD pipelines or load testing. My Python is at working level, alongside TypeScript, and my degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Paris. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
