Application: Power Platform & Copilot Engineer, SoftwareOne

Dear Hiring Team,

I am applying for the Power Platform & Copilot Engineer role in Sofia. I build automations, API integrations and AI agents that answer questions and trigger business processes, and I would like to do that on the Microsoft stack with the structured ramp you describe.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and built an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I led a live migration to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users, and I write documentation and handovers. I work in TypeScript and Python and check my work with Playwright and Postman.

On the gaps, plainly: I have not built Power Platform solutions for real users. My exposure is the Microsoft Power Automate and Copilot Studio Agent Academy certifications on my CV, not two years of Power Apps or Power Automate delivery. I have not worked with canvas or model-driven apps, Dataverse, SharePoint Online or Microsoft ALM, and I have not built Copilot Studio agents in a customer project. My agents so far were built with code and LLM APIs, not Copilot Studio. My Python is at working level, alongside TypeScript. My degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Sofia for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
