Application: UiPath Developer, Version 1 (Dublin, hybrid)

Dear Hiring Team,

I am applying for the UiPath Developer role in Dublin. I build automated workflows and integrations for a living, and I would like to move that work onto an enterprise automation stack.

At FlowSpace I built n8n automations, integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and built support agents that answer against live platform data and escalate to a person on low confidence. I led a live migration off a legacy stack to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users, and I work in Git and GitHub with Jira. Claude Code, which you list as desirable, is my default way of building. I also hold the Microsoft Power Automate and Copilot Studio Agent Academy certifications listed on my CV.

On the gaps, plainly: I have not developed UiPath bots, so I would be learning the platform on the job. I have not written C# or .NET, I have not worked with SQL Server, T-SQL or stored procedures, and I have not used Azure DevOps or release pipelines; my databases have been PostgreSQL, MySQL and Supabase. I have integrated APIs rather than designed them for others. I have about three years of experience, and my degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit issued in Italy, and am available immediately. I am open to relocating to Dublin for the hybrid role, and I would confirm the right-to-work position for Ireland with you early in the process. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
