Application: AI Engineer, Laminar Projects / Shape Construction

Dear Hiring Team,

I am writing to express my enthusiastic interest in the AI Engineer position at Laminar Projects and Shape Construction. Turning the potential of Large Language Models into reliable, lean, and production-grade features that digitize real-world operations is precisely how I have approached engineering for the past three years.

At FlowSpace, I led development building production AI systems from exploration through deployment. I designed an automated multi-modal ingestion pipeline that processes complex property brochures across PDFs, spreadsheets, and web pages, utilizing prompt engineering and structured LLM outputs alongside deterministic validation and human-in-the-loop review to draft 900+ listings. I also built customer support agents that interface with live platform data, implementing confidence thresholds and automated routing. I work pragmatically with Python, TypeScript, REST APIs, and modern developer tooling (Claude Code, Git, Docker, Playwright), with an emphasis on simplicity, maintainability, and tight collaboration with product teams.

I hold an Italian EU Long-Term Residence Permit, granting unrestricted permanent right to live and work across the European Union without employer visa sponsorship. I am based in Venice, Italy (CET), available immediately, and excited by Shape's high-ownership culture and mission to digitize construction.

Thank you for your time and consideration.

Kind regards,
Prabhavit Gupta
