Dear Justworks Hiring Team,

I am writing to express my strong interest in the Senior Software Engineer, Applied AI position at Justworks. Designing and building an autonomous agent platform that can read operational knowledge, reason about it in context, and reliably execute multi-step workflows end-to-end aligns directly with my engineering background as an applied AI developer and integration architect.

Over the past three years as Lead Developer at FlowSpace.co, as an AI solutions developer with Urlink, and having previously worked in Utrecht, Netherlands with Tractionboard.co, I have focused heavily on building production-grade agent workflows and robust backend services:

- **Agent Platform Orchestration:** Architected autonomous multi-step agent systems with schema-enforced tool execution, contextual memory, and confidence-gated human-in-the-loop approvals, including an autonomous document ingestion bot that drafted 900+ listings.
- **Operational Knowledge & Integration Infrastructure:** Built reliable API integrations, webhooks, and knowledge retrieval pipelines (RAG, vector indexing) connecting AI agents directly to live platform data and core business operations.
- **Trust, Safety & Evaluation Harnesses:** Implemented deterministic guardrails, structured audit logs, and automated evaluation harnesses measuring output accuracy and regression safety across agent iterations.
- **European Work Authorization:** Holder of an EU Long-Term Residence Permit with unrestricted permanent work authorization across all EU member states (including the Netherlands) without requiring visa sponsorship. Fully equipped for remote collaboration.

I welcome the opportunity to discuss how my hands-on agent systems experience, backend integration skills, and practical problem-solving approach can contribute to Justworks' mission of transforming operational workflows through applied AI.

Kind regards,

Prabhavit Gupta
