Dear Taxbit Hiring Team,

I am writing to express my strong enthusiasm for the Forward Deployed Engineer position at Taxbit in Madrid. The dual focus of this role—standing shoulder-to-shoulder with enterprise clients, developers, and CTOs to guide technical architecture, while actively contributing scalable code back into the core platform—reflects exactly how I operate as an engineer and builder.

Over the past three years as Lead Developer at FlowSpace, as a Project Manager and Developer with Urlink in Barcelona, and as an independent technical consultant, I have operated extensively at the nexus of client delivery and core software development. I architected and operated the production AI customer agent runtime serving 4,500+ active users, grounded against live operational databases and partner APIs (OfficeRnD, Nexudus). To ensure zero tolerance for errors across critical transactional logic, I engineered schema-validated tool calling, strict guardrails, and automated evaluation loops over real production logs. Furthermore, I prioritize developer velocity and code hygiene: building resilient API integrations, relational schemas in PostgreSQL, and automated regression suites using Playwright.

Key areas where my background directly connects with Taxbit's mission include:

- **Client-Facing Engineering & Technical Advisory:** Proven ability translating complex, multi-party business requirements into clear technical specifications, architecting robust integration runbooks, and delivering live technical demos for enterprise stakeholders.
- **Full-Stack Mastery (TypeScript, React, Node, Python):** Deep hands-on proficiency designing and consuming scalable RESTful APIs, webhook architectures, stateful application logic, and relational schema migrations.
- **AI as an Operational Force Multiplier:** Daily power-user of modern agentic development workflows (Claude Code, Cursor) to write well-tested, maintainable code rapidly without sacrificing architectural rigor.
- **EU Authorization & Madrid Relocation:** As an EU Long-Term Residence Permit holder, I possess unrestricted permanent work authorization across Spain and the European Union without requiring visa sponsorship. Having previously collaborated with teams in Barcelona, I am excited to relocate immediately to Madrid.

I would welcome the opportunity to speak with you about how my technical delivery experience and full-stack software foundation can help Taxbit deliver seamless financial and compliance automation for your global clients.

Kind regards,

Prabhavit Gupta
