Dear StackBlitz / Bolt.new Hiring Team,

I am writing to express my strong enthusiasm for the Senior Applied AI Engineer position at StackBlitz. Building state-of-the-art coding agents that empower people to turn ideas into fully functional applications without friction is the most exciting frontier in software development today. Bolt.new is pioneering this revolution, and the challenges you are tackling—agent reasoning loops, context compression across large repositories, robust tool calling, and evaluation harnesses—directly match my hands-on focus over the past three years.

As Lead Developer at FlowSpace, I architected and deployed production agentic systems and developer workflows. A central focus of my work was engineering multi-step autonomous customer support agents with live tool use and function calling against platform endpoints, incorporating confidence checks, fallback paths, and human escalation. Furthermore, I built an automated document ingestion pipeline with human-in-the-loop validation that extracted structured schemas from unstructured sources, parsing over 900 records. Within my daily engineering workflow, I actively leverage and build with agentic devtools (Claude Code, Cursor, MCP servers), optimizing prompts, structuring JSON outputs, and managing context limits.

My practical experience maps directly to the Bolt.new AI team's priorities:

- **Autonomous Agent Loops & Tool Use:** Deep hands-on experience designing structured tool-calling architectures, schema validation, state machines, and multi-step reasoning pipelines.
- **Multi-Model Evaluation & Prompt Engineering:** Extensive work benchmarking and evaluating models across Anthropic (Claude 3.5 Sonnet / Haiku), OpenAI (GPT-4o), and Google Gemini, balancing output quality, cost, and latency.
- **Production Full-Stack Engineering:** Solid fundamentals in TypeScript, Node.js, working-level Python, REST APIs, WebSockets, Supabase, and automated regression testing with Playwright.
- **Pragmatic Execution & High Ownership:** Proven ability to take ambiguous product requirements from concept to reliable production deployment with minimal overhead.

Based in Venice, Italy, I hold an EU Long Term Residence Permit providing unrestricted European right to work without sponsorship. I work comfortably across time zones and am fully able to accommodate the required 7:00 AM to 10:00 AM Pacific Time collaboration window (which aligns with my standard late-afternoon CET schedule).

I would love the opportunity to contribute to Bolt.new and help build the future of software creation.

Kind regards,

Prabhavit Gupta
