Dear Aircall Hiring Team,

I am writing to express my strong enthusiasm for the Forward Deployed Engineer – Key Accounts (AI Solutions) position at Aircall in Berlin. Working directly with strategic customers to bridge technical consulting, API integration engineering, and practical AI agent adoption perfectly describes how I build and deliver software.

Over the past three years as Lead Developer at FlowSpace, as a solutions developer with Urlink in Barcelona, and as an independent technical consultant, I have operated at the intersection of client delivery and production system architecture. At FlowSpace, I architected and maintained the production AI customer support agent runtime serving 4,500+ active enterprise users, grounding model behavior against live operational databases and partner APIs through strict JSON tool schemas and deterministic validation. I also built automated evaluation frameworks analyzing real production transcripts to catch edge cases, optimize latency, and systematically eliminate hallucinations.

Key areas where my background directly connects with Aircall's Key Accounts mission include:

- **Key Account Technical Partnership & Discovery:** Experienced running discovery sessions with business and technical stakeholders, translating complex workflows into crisp technical architectures, and partnering with commercial teams to prove fast time-to-first-value before expanding into multi-stage automation roadmaps.
- **Integration & Workflow Orchestration:** Deep hands-on experience building and troubleshooting RESTful and GraphQL APIs, webhooks, JSON schemas, custom Model Context Protocol (MCP) servers, low/no-code platforms (n8n, Make), and CRM automation (HubSpot, Salesforce).
- **Agentic AI Guardrails & Configuration:** Practical expertise defining agent intents, system prompts, schema-enforced tool execution, fallback escalation to human operators, and continuous performance evaluation over real production execution traces.
- **EU Work Authorization & Berlin Hybrid Commitment:** As an EU Long-Term Residence Permit holder, I possess unrestricted permanent work authorization in Germany and across the EU without requiring visa sponsorship. I am fully prepared to relocate to Berlin and work onsite 3 days per week.

I would welcome the opportunity to discuss how my integration engineering background and agentic AI experience can help Aircall drive rapid, high-impact adoption across your strategic accounts.

Kind regards,

Prabhavit Gupta
