Prabhavit Gupta

Solutions Engineer: Graph Intelligence, Enterprise Data Architecture & PreSales

+39 351 610 7807 | prabhavitg@gmail.com | linkedin.com/in/prabhavit | github.com/prab-gupta | Venice, Italy

Summary

Customer-facing Solutions Engineer and Lead Developer with 3 years of hands-on production experience architecting complex data integrations, knowledge-driven applications, and enterprise technical workflows. Proven track record partnering with technical and executive stakeholders across the entire customer lifecycle—from initial technical discovery, requirements scoping, and solution architecture design through hands-on proof-of-concept (PoC) builds, live whiteboarding sessions, and post-sales adoption. Technologically adept in relational and graph data modeling, schema design, API connectivity, and modern AI workloads (Knowledge Graphs, Graph RAG, structured tool calling, and deterministic validation). Combines strong programming proficiency in TypeScript, Python, and SQL with consultative problem-solving to translate high-level business objectives into robust, scalable technical architectures. Holder of EU Long-Term Residence Permit (permanent unrestricted legal right to work across Italy and all EU member states without visa sponsorship); resident in Venice, Italy.

Technical Expertise

- **Solutions Engineering & PreSales Leadership:** Technical discovery, consultative solution design, tailored customer PoCs, live technical demonstrations, architecture whiteboarding, objection handling.
- **Data Modeling & Graph Architectures:** Knowledge graphs, entity-relationship modeling, graph RAG pipelines, Cypher/SQL querying, schema migrations, structured JSON extraction & validation.
- **Full-Stack & Backend Systems:** TypeScript, Node.js, Python (FastAPI), RESTful API design, webhook synchronization architectures, PostgreSQL, Redis caching.
- **Applied AI & Enterprise Automation:** Multi-step agent orchestration, schema-enforced tool calling, LLM grounding against structured databases, guardrails, fallback escalation workflows.
- **Cloud, DevOps & Reliability:** Docker containerization, AWS, GCP, Linux, CI/CD automated deployment pipelines, automated integration testing (Playwright), telemetry and log observability.
- **Languages & Authorization:** English (C1 Professional), Hindi (Native), Italian (Beginner). EU Long-Term Residence Permit (permanent unrestricted EU work authorization in Italy, no visa sponsorship required).

Experience

FlowSpace.co **Mar 2024 - Aug 2026**
Lead Developer & Integration Architect *London, UK (remote)*

- Directed end-to-end technical customer integration architecture for an active commercial platform serving 4,500+ users, translating complex operational requirements into scalable data services and automated workflows.
- Architected multi-entity data synchronization pipelines integrating third-party operational platforms (OfficeRnD, Nexudus) with central relational and structured stores under strict consistency constraints.
- Led technical discovery sessions and delivered interactive solution demonstrations to enterprise partners, standardizing integration playbooks that reduced client onboarding friction.
- Designed and deployed AI-driven automation runtimes grounded on live operational databases using strict schema-enforced tool definitions, eliminating hallucinations and ensuring deterministic outcomes.
- Engineered automated monitoring, structured telemetry, and fallback routing mechanisms, achieving continuous platform reliability and high operational visibility.
- Implemented automated end-to-end regression test suites with Playwright, verifying API contracts and continuous deployment stability across critical customer transaction flows.
- Modernized platform infrastructure to Next.js and containerized backend microservices, supporting platform scaling from 2,000 to 4,500+ users without performance degradation.

Urlink **Apr 2025 - Jul 2025**
Project Manager & Solutions Developer (Freelance) *Barcelona, Spain (remote)*

- Led technical discovery and backend workflow architecture for enterprise web applications, bridging client business priorities with engineering execution.
- Engineered secure, schema-validated synchronization connectors linking third-party APIs with core PostgreSQL databases, guaranteeing relational and structural data integrity.
- Established automated CI/CD deployment pipelines and automated integration validation, eliminating deployment regressions across distributed development teams.

Independent Technical Consultant **Aug 2023 - Feb 2024**
Solutions & Automation Engineer *Venice, Italy*

- Consulted directly with European SME clients to analyze operational data flows, author comprehensive technical specifications, and build bespoke automation connectors.
- Built resilient data ingestion pipelines, web extraction tools, and webhook listeners in Python and TypeScript, featuring automated retry logic and fault-tolerant state persistence.
- Delivered tailored technical demonstrations and workshops for client stakeholders, training technical and operational teams on newly deployed software integrations.

Education

Ca' Foscari University of Venice **2020 - 2024**
BA in Philosophy, International Studies and Economics *Venice, Italy*

- Rigorous grounding in formal logic, analytical problem solving, systems analysis, and macroeconomic decision models.
