Application: Automatisierungsingenieur (m/w/d), Modulist GmbH

Dear Hiring Team,

I am applying for the Automation Engineer role. Connecting systems through APIs and building AI-assisted tools is the work I have done for the last three years, mostly with n8n and Make.

At FlowSpace I built CRM and GTM automations, integrated the OfficeRnD and Nexudus APIs, and built an LLM ingestion pipeline with human review that drafted 900+ listings. I worked directly with the internal team, an external agency and customers, so I am used to turning a business problem into a working, documented solution. I build quickly with AI tools such as Claude Code and write JavaScript/TypeScript for web work. I have not worked with WordPress or hosting setups before, and I would pick those up as the projects need them.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), am open to relocating, and am available immediately. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
