Application: Automation Engineer (m/w/d), Workflow- und Prozessautomatisierung, relyon AG

Dear Hiring Team,

I am applying for the Automation Engineer role in workflow and process automation. For the last three years I have been building automations and integrations with n8n and Make, and I hold the Microsoft Power Automate and Tray.AI Build Practitioner certifications.

At FlowSpace I built CRM lead-capture and GTM automations, integrated the OfficeRnD and Nexudus APIs over REST, webhooks and OAuth, and built an LLM ingestion pipeline with human review that drafted 900+ listings. I also led a migration to Next.js and Laravel, where I mapped data and processes between systems, so I am used to thinking about how the parts of a process fit together. I write Python and JavaScript/TypeScript when a workflow needs more than a visual builder.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), am open to relocating, and am available immediately. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
