**Application: Full Stack Engineer in PHP, React and MySQL, Ninacare (Senex)**

Dear Hiring Team,

I am applying for the Full Stack Engineer role. Your stack is close to the one I work in every day, and I like that you expect people to guide the AI rather than follow it.

At FlowSpace I led a migration from a legacy stack to Next.js and Laravel, including mapping the data and the cutover, while the platform grew from 2,000 to 4,500+ users. I work in Laravel, React, TypeScript and MySQL, and I have built AI agents and an LLM ingestion pipeline with human review. I use Claude Code daily and I own the output I ship. I have not used Docker, AWS or Terraform in production, and I would learn them on the job. My Italian is at beginner level, so I would be working in English.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
