Application: AI Solutions Engineer / AI Enablement Engineer, Redcare Pharmacy

Dear Hiring Team,

I am applying for the AI Solutions Engineer role. My last three years have been spent turning business processes into AI-powered workflows that people actually use, which is what the role describes.

At FlowSpace I built support agents with tool use and escalation to a person, an LLM ingestion pipeline with human review that drafted 900+ listings, and CRM and GTM automations with n8n. I work in Python and TypeScript with the Claude and OpenAI APIs, and I have built RAG-style features on top of them. I am comfortable scoping a problem with non-technical stakeholders, building a prototype quickly, and supporting the team through adoption. I have not worked with Azure Databricks or Kubernetes, and I do not have a computer science degree, but I learn tools quickly and my work is shipped and in use.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
