**Application: Senior Full Stack Engineer, Agentic Workflows, RobCo**

Dear Hiring Team,

I am applying for the Senior Full Stack Engineer, Agentic Workflows role. Designing agents that work alongside people, with review checkpoints where humans correct the output, is the part of this work I find most interesting.

At FlowSpace I built support agents with tool use that escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings. I also led the migration from a legacy stack to Next.js and Laravel while the platform grew from 2,000 to 4,500+ users. I work in TypeScript and Python, use Claude Code daily, have built with MCP, and enjoy working with non-engineering teams to design automation around how they actually work. I have about three years of experience, so I am earlier than the senior level suggests, and I have not yet run formal evals or full production observability for agents. I would like to take that on.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
