Prabhavit Gupta

Forward Deployed Software Engineer | AI Data Platforms, System Integrations & Client Solutions

+39 351 610 7807 | prabhavitg@gmail.com | linkedin.com/in/prabhavit | github.com/prab-gupta | Venice, Italy (EU Permanent Resident | Open to Relocation to London / NY / SF)

Executive Summary

- **Forward Deployed Engineering & Integrations:** Software engineer with 3 years commercial software experience taking AI platforms into enterprise customer environments, architecting production integrations, and building scalable solutions for complex data lifecycles.
- **Data Ingestion & System Design Judgment:** Proven track record designing resilient API pipelines, automated data transformation workflows, and client-facing tool integrations across heterogeneous technical stacks under real production constraints.
- **High-Agency Execution & Technical Partnership:** Fluent across Python and TypeScript, bridging customer-facing technical discovery with hands-on systems engineering, debugging deployment edge-cases, and feeding architectural insights back into core platform product roadmaps.

Technical Skills & Core Competencies

- **Forward Deployed Engineering:** Customer System Architecture, Technical Scoping, API Integrations, Production Rollouts, Custom Client Tooling, Data Workflows, Cross-Functional Technical Communication.
- **AI Data Systems & Automation:** Data Ingestion Pipelines, LLM Tool Calling, Structured Data Parsing (Pydantic, Zod), Model Context Protocol (MCP), Automated QA & Evaluation Suites, Playwright.
- **Software Development:** Python (AsyncIO, Requests, PyTest), TypeScript, Node.js, Next.js, Laravel, REST APIs, GraphQL, SQL (PostgreSQL, SQLite), Docker, Git.
- **Developer Operations & Tooling:** Postman, GitHub Actions, CI/CD, Distributed Tracing (Langfuse), Linux CLI, Agile/Jira, Technical Documentation.

Professional Experience

Forward Deployed AI Engineer & Technical Solutions Consultant • *Independent Consultancy*
2024 – Present • Venice, IT (Remote / Hybrid)

- Partnered directly with enterprise client engineering teams to scope technical requirements, architect custom integrations, and deploy AI data workflows solving mission-critical business bottlenecks.
- Engineered high-throughput data extraction and transformation pipelines integrating customer APIs, ensuring structured output schemas and handling rate limits, authentication, and error recovery.
- Built bespoke integration harnesses and developer scripts connecting client internal databases and cloud repositories to centralized AI processing endpoints.
- Debugged complex deployment issues across network latency, data consistency, and API rate limits, reducing customer integration friction and onboarding cycle time.
- Synthesized recurring customer technical challenges into reusable libraries and documentation, driving product improvements for subsequent customer implementations.

Lead Developer & Product Engineer • *FlowSpace.co*
Mar 2024 – Aug 2026 • London, UK (Remote)

- Led platform engineering and integration architecture, scaling the application from 2,000 to 4,500+ active users across European markets while maintaining high availability.
- Orchestrated end-to-end migration of production application off a legacy stack to a modern Next.js and Laravel architecture, ensuring zero downtime and complete data parity.
- Built automated data ingestion and web extraction pipelines aggregating complex unstructured venue data, validating data quality before database persistence.
- Integrated third-party management APIs (OfficeRnD, Nexudus) for automated booking synchronization, handling webhook events and idempotent state updates.
- Deployed AI customer support workflows with deterministic retrieval boundaries and automated fallback escalation, reducing support ticket turnaround.

Full-Stack Solutions Engineer • *Tech Automation Systems*
2023 – 2024 • Milan / Remote, IT

- Built custom backend services and API connectors in Python and TypeScript, integrating external partner platforms with internal data warehouses.
- Implemented automated testing suites and CI/CD pipelines in Docker, establishing reliable integration baselines for client deliverables.
- Worked directly with client stakeholders to gather operational requirements and translate ambiguous domain work-

flows into robust software specifications.

Key Engineering Projects

- **Universal Multi-Source Ingestion Pipeline (Python + Playwright + REST APIs):** Designed an automated data harvesting and enrichment system parsing 900+ structured and semi-structured external sources with schema validation and error isolation.
- **Autonomous Tool-Calling & Evaluation Harness (TypeScript + MCP + Langfuse):** Architected an execution harness enabling LLMs to safely interact with external APIs, validating payloads against strict schemas with automated tracing and regression metrics.

Education, Languages & Legal Status

- **Bachelor of Arts in Philosophy, International Studies & Economics** – Ca' Foscari University of Venice (2020 – 2024)
  Rigorous foundation in formal logic, epistemology, decision theory, and systems analysis.
- **Languages:** English (C1 Professional / Fluent), Italian (Working proficiency), Hindi (Native).
- **Legal Status & Availability:** EU Long-Term Resident (Permesso di Soggiorno UE a Tempo Indeterminato, Italy). Open to international relocation to London, New York, or San Francisco with visa sponsorship; available immediately.
