Application: Agentic AI Enablement Consultant, ACENSI (Brussels)

Dear ACENSI Hiring Team,

I am applying for the Agentic AI Enablement Consultant role with your energy sector client. Working with business teams to turn a concrete need into an agent that runs in production, and then reusing what worked, describes much of my recent work.

As Lead Developer at FlowSpace I built AI agents that streamline customer support and work against live data, and n8n workflows for lead routing, data sync and support queries, working directly with the internal team and an external agency on product and business logic. I built a Python pipeline that scrapes web content, uses the Claude and OpenAI APIs with structured outputs, and pushes records through human review to an API, adding 900+ listings, and a listing sync across 9 operators with staged approval and dry-run safety, so that changes were checked before they went live. I integrated the OfficeRnD and Nexudus APIs end to end (OAuth2, webhooks). I work with RAG, function calling, MCP and agent orchestration, and I hold Microsoft certifications in building AI agents.

On the gaps: I have about three years of experience, which fits medior but not senior. I have no AWS experience beyond calling APIs, and no cloud administration. I have not worked with Agent-to-Agent (A2A) protocols in a project, and I have not run a formal AI governance framework; my responsible delivery so far has been human review steps and staged approvals. I do not speak French or Dutch; I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Brussels. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
