Application: Software Engineer AI, CHAMP Cargosystems (Barcelona)

Dear CHAMP Hiring Team,

I am applying for the Software Engineer AI role in your Cargo Management team. Building LLM-based workflows that turn messy operational data into reliable records, and shipping them into an existing product, is the work I have been doing.

As Lead Developer at FlowSpace I built a Python pipeline that scrapes web content, uses the Claude and OpenAI APIs with structured outputs for extraction, and pushes records through human review to an API, adding 900+ listings. I also built a Python listing sync across 9 operators with rapidfuzz matching, staged approval and dry-run safety, AI agents for customer support that work against live data, and end-to-end OfficeRnD and Nexudus integrations (OAuth2, webhooks). I worked on the migration to Next.js and Laravel while users grew from 2,000 to 4,500+. Earlier, at UltraStrategy, I built a CV parsing tool with n8n and Eden AI, which is close to the document understanding you describe. I work with RAG, prompt engineering, function calling and MCP, and use Git and GitHub, PostgreSQL, MySQL and SQLite.

On the gaps: I have about three years of professional experience. I have not worked with Java, Spring Boot or Angular, and I have not run Docker, OpenShift or Kubernetes in production or built GitLab CI pipelines. I have not trained classical ML models or set up formal LLM evaluation or monitoring, and I would want to learn those practices from your senior engineers. My degree is in Philosophy, International Studies and Economics, not computer science. I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Barcelona. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
