Application: Forward Deployed Engineer / AI Solutions Engineer, AutoSolutions.ai

Dear Hiring Team,

I am applying for the Forward Deployed Engineer / AI Solutions Engineer role. Sitting with a team, finding what slows them down and building the AI system that fixes it is the work I have done for the last three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. Each of those was built with the people who used it, sales and operations colleagues, and I kept an approval step wherever bad data would be costly. I also integrated the OfficeRnD and Nexudus APIs and led a live migration off a legacy stack. I build with Claude Code and MCP and write the code myself in TypeScript and Python at working level.

On the gaps: I have not run an automated evaluation pipeline, so my quality checks are human review and confidence thresholds. I have not integrated ERP or BI systems, I have no hardware, IoT or robotics experience, and I have not worked as a consultant. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Barcelona for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
