Application: Customer Success Engineer, Hightouch

Dear Hiring Team,

I am applying for the Customer Success Engineer role. Helping users get value from a technical product, by reading the documentation, tracing what happens between their systems and explaining it clearly, is work I have done at FlowSpace.

There I worked directly with customers, the sales and operations team and an external agency. I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n, and built support agents that answer against live platform data and escalate to a person on low confidence, so I know which questions users keep asking and what a good answer needs. I also wrote the documentation and handover for what I shipped and led a live migration off a legacy stack.

On the gaps: I have not held a dedicated customer success or support engineering role, my SQL is at working level, I have not used a composable CDP or reverse-ETL product such as Hightouch, and I have not worked in marketing-data tooling. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am happy to work remotely from Italy. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
