Application: Forward Deployed Engineer, LatticeFlow AI

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. Getting into a customer's real AI environment and building the integrations and workflows that make something work for them is the hands-on part of this role that I have done.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and OfficeRnD and Nexudus integrations over REST APIs, webhooks and OAuth. I worked directly with customers and technical teams, wrote scripts and workflows where needed, documented what I shipped, and led a live migration off a legacy stack. My human review step and confidence thresholds are my own way of controlling what an AI system is allowed to do.

I want to be plain about the gaps, because they are real for this role. I have no technical pre-sales experience: I have not run demos, scoped proofs of concept or proofs of value, or worked with a sales team to close deals. I have not deployed enterprise software on-premise, I have no ML research background, and I have no experience with AI governance or compliance frameworks such as the EU AI Act, NIST or ISO 42001. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Sofia and working from the office. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
