Application: Forward Deployed Engineer, Maisa AI

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. Making an AI system reliable enough for a customer's decision-heavy process, with rules around it and a person where a wrong answer is costly, is how I have been building.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, with an approval step so bad data never reached the backend. I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, worked directly with customers and an external agency, and led a live migration off a legacy stack. I work in TypeScript and JavaScript and use Python at working level.

On the gaps: for the integrations track I have not written Go, built microservices or serverless functions, or worked with queues and event-driven architectures beyond webhooks and n8n workflows. For the infrastructure track I have no DevOps or SRE background and have not worked with Kubernetes, cloud infrastructure, on-premise deployments, OIDC or SAML, or regulated customer environments. My checks on agents are human review and confidence thresholds.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I can work remotely from Italy, and I am open to relocating to Spain if the role needs it. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
