Application: Associate Solutions Engineer, Auth0, Okta

Dear Hiring Team,

I am applying for the Associate Solutions Engineer role at Auth0. I like working with developers on how a product fits into the systems they already have, and I have spent three years doing that kind of integration work.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, built support agents that answer against live platform data and escalate to a person on low confidence, and led a live migration off a legacy stack to a coded Next.js and Laravel product. I worked directly with customers, the sales and operations team and an external agency, and wrote the documentation and handover for what I built. I write TypeScript and Laravel code and explain technical choices in plain language.

On the gaps: I have no pre-sales experience. I have not given product demonstrations, run proofs of concept for prospects, or worked alongside a sales team on a sales cycle. My degree is in Philosophy, International Studies and Economics, not engineering or computer science. My identity knowledge is OAuth from integration work, and I have not worked with SAML, OIDC, SCIM or LDAP, or with identity security topics. I am keen to learn them.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Dublin and working from the office three to four days a week. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
