Subject: Application for Senior Fullstack Engineer: AI, Backend, Infrastructure

Dear TODAY Team,

I am writing to express my strong enthusiasm for the Senior Fullstack Engineer position at TODAY. Your mission to make financial and insurance advisors truly AI-native through real-time meeting intelligence, Voice AI, and deep agentic workflows aligns directly with my core engineering expertise in Model Context Protocol (MCP), agent architectures, and resilient Python/Postgres backend infrastructure.

Over the past three years of commercial software and AI engineering, I have specialized in building and shipping production-grade agentic systems and tool-using LLM platforms:

- **Model Context Protocol (MCP) & Tool Integration:** I have architected and deployed custom MCP servers and clients, standardizing tool-calling patterns and data interfaces so autonomous agents can safely query relational databases, internal APIs, and multi-tenant services.
- **Autonomous Agents & Memory:** Using LangGraph and LangChain, I have designed multi-step agents handling complex multi-turn context, memory persistence, dynamic context pruning, and automated fallback gates.
- **Evals, Tracing & Observability:** I prioritize rigorous evaluation harnesses and observability, utilizing tools like Langfuse and OpenTelemetry to track latency, token budgets, and context precision across prompt iterations.
- **Robust Backend Microservices:** My foundational stack centers on Python (FastAPI, AsyncIO, PyTest), TypeScript, and PostgreSQL (pgvector), deployed within containerized Docker environments on Microsoft Azure with security-first credential isolation.

As an EU permanent resident based in Venice, Italy, I am immediately available for full-time remote engagement across European time zones and thrive in fast-paced startup environments where engineering ownership and rapid iteration drive measurable customer value.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my hands-on background in MCP integrations and agentic systems can accelerate TODAY's product roadmap.

Sincerely,
Prabhavit Gupta
