Application: Product Engineer, DOJO AI

Dear Hiring Team,

I am applying for the Product Engineer role. I like owning a problem from what the user needs to the interface, the service, the data and the AI in between, and iterating from real usage.

At FlowSpace I built an LLM ingestion pipeline with a human review step that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, support agents that answer against live platform data and escalate to a person on low confidence, and a commute-time calculator tool for companies. I led the migration off a legacy stack to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users. I work in TypeScript, React and Next.js, and use Claude Code every day with review of what it writes.

On the gaps: my backend experience is Node.js and Laravel, and my Python is for AI integrations and scripting, so I have not built FastAPI services. My degree is in Philosophy, International Studies and Economics, not computer science, and I learned engineering on the job. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Lisbon for the hybrid setup. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
