Application: Solutions Engineer, Dust

Dear Hiring Team,

I am applying for the Solutions Engineer role. Helping people see how AI agents fit into their own work, and building the first agent with them, is the part of my work I enjoy most.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I worked directly with customers, the sales and operations team and an external agency, wrote the documentation for what I shipped, and led a live migration off a legacy stack. I work with prompts, tool use and APIs every day through Claude Code and the Claude and OpenAI APIs.

I want to be plain about the gaps, because this is a sales-side role: I have not worked as a solutions or sales engineer, I have not given product demonstrations to prospects or run technical evaluations and pilots, and my customer-facing experience is delivery rather than selling. I have about three years of experience. What I bring is hands-on agent building and clear explanations.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Paris. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
