Application: Product Engineer, Growth Acquisition, Mentimeter

Dear Hiring Team,

I am applying for the Product Engineer, Growth Acquisition role. A website built as a system that people and AI agents work on together, rather than a CMS with extras, is a problem I would like to work on.

At FlowSpace I led the migration off a legacy stack to a coded Next.js and Laravel product, mapping the data model and moving it entity by entity while the platform grew from 2,000 to 4,500+ users. I built internal tools and automations for sales and operations users, and an LLM ingestion pipeline with human review that drafted 900+ listings. I work in TypeScript and Next.js, use Claude Code with written context and review every diff, and I used Google Analytics and Microsoft Clarity to see how the product was used.

On the gaps: I have limited hands-on experience with technical SEO, experimentation and A/B testing platforms, server-side tracking, attribution, Core Web Vitals work and headless CMS platforms. My analytics experience is Google Analytics and Microsoft Clarity. Those are the parts I would be picking up, and I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Stockholm and working in the office three days a week. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
