Application: AI Engineer (Applied AI), PAYSTRAX

Dear Hiring Team,

I am applying for the AI Engineer (Applied AI) role. Integrating LLM tools into real business processes, with limits on what the model may do, is the work I have done at FlowSpace.

There I built support agents with tool use that answer against live platform data, with confidence thresholds and escalation to a person as guardrails, and an LLM ingestion pipeline with human review that drafted 900+ listings. I configured the prompts, retrieval and tools, integrated third-party APIs over REST, webhooks and OAuth, and tested with Playwright. I work in TypeScript and Node.js with Claude Code, and I turn what business teams describe into rules an agent can follow.

On the gaps: I have not built an automated evaluation pipeline, so my quality checks so far are human review and confidence thresholds. I have not built MCP services that expose internal systems, owned a CI/CD pipeline, or worked with containers or cloud infrastructure, and I have not worked in a regulated payments environment. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Vilnius and working in the office at least three days a week. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
