Application: Forward Deployed Engineer, Plum

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. Sitting with an operations team, finding where AI and automation remove manual work, and building it with them is how I have worked at FlowSpace.

There I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I worked directly with sales and operations users, connected systems through REST APIs, webhooks and OAuth, and led a live migration off a legacy stack.

On the gaps: my Python is for scripts and AI integrations, not yet FastAPI or Flask services that I own and monitor over time, and I mostly write TypeScript. I have not used Gemini, Google ADK or LangChain, Intercom, Grafana or Sentry, and I have not worked in a fintech or regulated setting. My checks on agents are human review and confidence thresholds, not a formal evaluation setup.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Athens for the hybrid setup. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
