Dear Artefact Hiring Team,

I am writing to express my strong enthusiasm for the Forward Deployed Engineer position at Artefact in Utrecht. Artefact's mission—deploying applied AI systems directly into client cloud environments that remain robust and maintainable long after delivery—embodies precisely the engineering philosophy and hands-on rigor I bring to client-embedded problem solving.

Over the past three years as Lead Developer at FlowSpace and as an independent technical consultant, I have worked directly at the intersection of enterprise discovery and production software delivery. I designed and deployed an autonomous production AI agent serving 4,500+ active users, grounded strictly in live PostgreSQL databases and partner operational APIs. To ensure reliability, I engineered schema-validated tool calling, strict guardrails, and automated evaluation against real production transcripts. Crucially, I know the difference between a proof-of-concept and production software: I architect systems with clear API contracts, relational data integrity, and automated testing suites using Playwright, designed for client teams to maintain, operate, and trust.

Key areas where my background directly connects with Artefact's mission include:

- **Forward Deployed Mindset & Discovery:** Proven experience embedding directly with client stakeholders, uncovering root operational bottlenecks, and rapidly translating them into scoped technical architectures and hardened software deliveries.
- **Applied Generative AI & Agent Ecosystems:** Hands-on proficiency with agentic orchestration, tool and function calling, Model Context Protocol (MCP), and RAG pipelines (chunking, vector embeddings, hybrid retrieval). Daily power-user of agentic coding tooling (Claude Code, Gemini CLI, Cursor).
- **Production Cloud & Full-Stack Delivery:** Strong backend development in Python (FastAPI, microservices), frontend in TypeScript/Next.js/React, relational databases in PostgreSQL/BigQuery, and containerized deployments with Docker across GCP.
- **EU Work Authorization & Utrecht Relocation:** As an EU Long-Term Residence Permit holder, I possess unrestricted permanent work authorization across the EU without requiring visa sponsorship. I am based in Venice, Italy and am ready to relocate immediately to Utrecht to work on-site/hybrid with Artefact.

I would welcome the opportunity to discuss how my client-facing delivery experience and applied AI skills can help Artefact deploy next-generation enterprise AI solutions for your clients.

Kind regards,

Prabhavit Gupta
