Dear Brave Hiring Team,

I am writing to express my strong enthusiasm for the Senior Solutions Engineer, API & Developer Platform role at Brave. As an engineer who builds and evaluates autonomous LLM agents, RAG retrieval pipelines, and developer integrations daily, I deeply admire Brave's mission of providing independent, privacy-first search infrastructure for the AI era. Powering developer workflows without Big Tech lock-in or data retention is an essential foundation for the future of AI.

Throughout my three years of technical experience, most recently as Lead Developer at FlowSpace, I have operated right at the intersection of technical architecture, developer tooling, and customer problem solving. I designed autonomous customer support agents utilizing live tool calling and REST API function execution, engineered automated knowledge extraction pipelines handling 900+ verified records, and integrated external APIs with idempotent event handling. I routinely demonstrate API capabilities, write clear documentation, build proof-of-concept integrations, and test endpoints with cURL, Postman, TypeScript, and Python.

Key areas where my background aligns with Brave's needs:

- **AI & Search Architecture:** Hands-on understanding of RAG architectures, lexical vs. semantic search, context window constraints, prompt engineering, and LLM agent orchestration across Claude, OpenAI, and Gemini models.
- **Developer Credibility & Tooling:** Deep empathy for developer experience: clean API design, predictable rate limits, clear error messaging, robust documentation, and minimal time-to-first-successful-call.
- **Solutions Engineering & Rapid Prototyping:** Proven ability to engage with prospective technical users, evaluate their architectural requirements, build lightweight proof-of-concept integrations, and translate real customer friction into actionable feedback for Product and Engineering.
- **Communication & Ownership:** Clear, direct technical communication without buzzwords. Strong track record delivering resilient software in fast-paced remote environments.

Based in Venice, Italy, I hold an EU Long Term Residence Permit granting unrestricted right to work across the EU without requiring visa sponsorship. I am comfortable collaborating across European and US time zones and am immediately available to join Brave.

I would welcome the opportunity to discuss how my hands-on background in AI systems and developer integrations can help scale the Brave Search API developer ecosystem.

Kind regards,

Prabhavit Gupta
