Dear CHAPTERS Group team,

I am applying for the AI Platform Engineer role in Cologne. I am based in Venice and open to relocating to Cologne for the hybrid setup. I hold an EU Long Term Residence Permit, so no sponsorship is needed, and I am available immediately.

I have shipped LLM features to real users. As Lead Developer at FlowSpace (Mar 2024 - Aug 2026), I built an AI listing pipeline in Python: web scraping, extraction with the Claude and OpenAI APIs into structured records, a human review step, then a push to the platform through its API. It produced 900+ records. I also streamlined customer support with AI agents working against live data, and I work with MCP, structured outputs and function calling.

On integrations and identity, I built the OfficeRnD and Nexudus integrations end to end (OAuth2, webhooks, location sync, booking automation). I oversaw the migration of the platform to Next.JS and Laravel while it scaled from 2,000 to 4,500+ users. I work with PostgreSQL and Supabase, and I build with Claude Code and GitHub.

Gaps, plainly: this role is centred on platform operations, and that is where I am weakest. I have no Azure, AWS or cloud administration experience, no Infrastructure as Code (Bicep, Terraform, CDK or CloudFormation), and no Docker experience. I have not worked as a DevOps or SRE engineer, and I have not used Open WebUI, Entra ID or Redis. I do not speak German or French. I have about 3 years of professional experience.

I would welcome the chance to walk you through the listing pipeline and the integrations.

Kind regards,
Prabhavit Gupta
